

YVI DWAN Executive Cyber Risk Command Center

Future-State Technical Architecture

From Security Signals → Business Risk → Executive Decision → Closed Loop

TARGET / FUTURE STATE

Not the current MVP - Conceptual + proposed implementation

PAYMENT GATEWAY EXAMPLE (illustrative walkthrough)

VAPT: Critical CVE + SOC: Exploit attempt + IAM: Privileged service account
+ PCI: Payment system in scope + Business: High financial / downtime exposure

→ **Correlation** → HIGH LIKELIHOOD + HIGH IMPACT → HIGH RISK → EXCEEDS TOLERANCE

→ **ECC Escalation** → Executive Decision: "Approve Emergency Patch Window"

Visually mirrors sections 03 → 04 → 05 of the main pipeline

DATA LAYER (logical entities from ECC ERD / schema — not every column)

TENANCY & IDENTITY - Organizations - Users	RISK - Risk Domains - Domain / Enterprise Snapshots	FINDINGS & IMPACT - Risk Findings - Business Impact Assessments	EXECUTIVE DECISIONS - Executive Decisions - Decision Action Log	COMPLIANCE - Frameworks - Org Compliance Status	ACTIVITY / REPORTS - Activity - Generated Reports	AUDIT Audit Log
---	--	--	--	--	--	--

CORE RELATIONSHIP: Finding → Business Impact → Executive Decision → Decision Action Log · Risk → Impact → Decision → Action

REPRESENTATIVE TECHNOLOGY LAYER (implementation technologies — not mandated vendors)

Ingestion API	API / Webhook / Event Connectors REST / Service APIs	Processing Presentation	Backend · Rules · Correlation React Executive Dashboard	Data Reporting	PostgreSQL + Evidence Store Report Generation Service
--------------------------------	---	--	--	---------------------------------	--

LEGEND

BLUE — Data / processing
ORANGE — Decision / policy
RED — Risk / escalation
GREEN — Remediation / closed loop
Solid arrow = primary flow · Dashed arrow = feedback / async
